- Set-up of your mobile app: with CommandIQ you can control your network with this easy-to-use app

Why does my current Wi-Fi have problems?

There are several key factors that impact your internet and Wi-Fi performance

- An old router with outdated firmware can be a primary cause of speed and performance issues. With Heartland Fiber's managed Wi-Fi system, we make sure you have the latest technology and that it stays updated with the latest firmware and security
- The placement of your older router could be causing problems as well. We'll make sure your new Wi-Fi system is ideally located to ensure seamless wall-to-wall coverage.
- Weak signals from inexpensive Wi-Fi solutions can cause significant coverage problems. Heartland Fiber's new GigaSpire BLAST system ensures a consistently strong signal throughout your home and business.
